

Why I Started The BioChem Chronicles

Category: Science Communication | Status: Research Note | 4 min read

A short introduction to the purpose of this site: using student-built projects, clear writing, and honest documentation to make biotechnology and bioinformatics easier to approach.

Materials

- Project notes
- Arduino project writeups
- Biotechnology and bioinformatics reading list
- GitHub Pages website files

What I learned

- Good documentation is part of the project, not an afterthought.
- A prototype can still be valuable when its limits are stated clearly.
- A portfolio should make it easy for a mentor to see how a student thinks.

Safety or accuracy note

This website is for learning and portfolio documentation. The project pages should not be treated as professional engineering, clinical, or laboratory validation.
